This is an enamel product to recreate natural dust effects. Simply apply it to your tanks wheels, tracks and hull to achieve the most realistic effect possible. You can also mix this product with plaster if you want to give your dust volume.

We apply the product directly from the jar on a well. For the adhered dust or dirt use a stiff brush and a toothpick (you can also use the airbrush). Projecting the mixture to get the splash pattern.

To give it texture add a little powdered plaster. With a clean brush dipped in thinner we can correct the too big spots.

It is worth practicing on paper until you get the desired effect. For the adhered dust or dirt use a stiff brush and a toothpick (you can also use the airbrush). Projecting the mixture to get the splash pattern.

Mix it with a brush. With a clean brush dipped in thinner we can correct the too big spots.

Observe the texture achieved in the basement of this vehicle.
