

**AK 071
BLUE FILTER FOR
PANZER GREY**

This product allows us to change subtly the tone of base color of our vehicle making it a more accurate and authentic colour. At the same time the filter adds depth and richness to our vehicle, preparing it for the next paint steps.

When applying the filter make sure you leave no stains behind as they can ruin the desired effect. the finish must be smooth.

Apply the filter over small parts and details to give them a different tone, variation in tone is important.

You can but you don't always have to apply the filter over the whole vehicle. When only applying the filter on some panels or parts it breaks up the monotony of the model and thus making it more interesting.

When using this filter it can change the look of your model subtle enough to get rid of otherwise a boring dark grey finish.
