

TIPS AND TRICKS

HOW TO MAKE WEIGHT IN TIRES

Fill the rubber tires with some tissue paper in order to make them look fuller.

Drill a small hole in the rim and insert a needle through the vinyl tire. Make sure the needle will fit in the corresponding hole in the rim and cut the needle to size.

Place a drop of glue in the hole in the rim and mount the tire on the rim making sure the needle inserts the hole in the rim and add some light pressure and hold it until the glue has dried.

Spot the difference between the weight tire on the left and the standard tire on the right.

This simple modification has great results and saves you from spending money on a set of aftermarket wheels.
